

PHAN TAI NGUYEN

AI ENGINEER

(+84) 939 104 390 | nguyenphan201203@gmail.com | District 8, HCMC.

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

CAREER OBJECTIVE

Aspiring AI Engineer seeking an internship opportunity to contribute to innovative projects that leverage artificial intelligence to solve real-world challenges. Eager to apply hands-on experience in machine learning, RAG pipelines, and LLM-based systems within a collaborative, fast-paced team environment.

EDUCATION

SaiGon University

Information Technology

2021 - Present

- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Data Structures & Algorithms

EXPERIENCE

Anh Minh Technology Trading Co., Ltd.

Jun 2025 – Aug 2025

AI Engineer Intern • Ho Chi Minh City, Vietnam (On-site)

- Identified and automated repetitive manual workflows across multiple departments by integrating AI tools, reducing time spent on routine tasks and measurably improving employee productivity.
- Designed and fine-tuned prompt engineering strategies tailored to each department's use cases, enabling non-technical staff to interact effectively with AI tools without prior ML experience.
- Conducted internal training sessions to guide employees on effective prompting techniques, accelerating AI adoption and ensuring consistent, high-quality outputs across teams.

PROJECTS

SGU-Agent — Personalized Academic Recommendation System

Feb 2025 - April 2025

Flask · Sentence-BERT · FAISS · Collaborative Filtering · T5 Vietnamese · SQLite

A Flask-based web application that recommends academic resources tailored to students' profiles and queries using semantic search and explainable AI.

- Built an end-to-end Flask web app that recommends academic resources by fusing semantic search (Sentence-BERT + FAISS HNSWFlat) with Collaborative Filtering (Jaccard similarity) for hybrid, personalized retrieval.
- Integrated VietAI/vit5-base to generate natural language explanations per recommendation, making AI decisions transparent to students.
- Implemented cold-start handling for new users via profile-based content filtering (major, academic year).
- Solo project — independently designed architecture, built all modules, and deployed the full-stack application.
- **GitHub:** github.com/nguyenfan20/SGU-Agent

Traffic SGU — Vietnamese Traffic Law Q&A System (RAG)

Feb 2025 – Apr 2025

LangChain · FAISS · Vietnamese Embedding · Zephyr-7B · Gradio · Python

A Tkinter-based app for managing student attendance, featuring an AI chatbot and voice-to-text functionality to enhance user interaction.

- Designed a full RAG pipeline over Vietnamese traffic regulation documents (Nghị định 168/2024/NĐ-CP), combining semantic chunking, FAISS vector retrieval, and a 4-bit quantized LLM (zephyr-7b-beta) for accurate, citation-grounded answers.
- Deployed a domain-specific Vietnamese embedding model (AITeamVN/Vietnamese_Embedding) for high-quality passage retrieval, achieving Excellent ratings in Correctness, Relevance, and Completeness on a 10-question evaluation set.

- Built an interactive Gradio chatbot UI with bilingual (Vietnamese/English) prompt routing via language detection.
- Team size: 3 members • Role: Project Lead & Architecture Design
- **GitHub:** github.com/nguyenfan20/Traffic_SGU

SKILLS

Technical Skills

- **Programming Languages:** Python, C, C++
- **Frameworks & Libraries:** PyTorch, TensorFlow Lite, Flask, LangChain, FAISS, Gradio
- **AI & Machine Learning:** RAG, BERT, T5 Vietnamese, LLM Fine-tuning, Semantic Search, Collaborative Filtering, Sentence Transformers
- **Research:** AI tool evaluation, semantic search, performance analysis, indoor positioning systems
- **Developer Tools:** Git, VS Code, Google Colab, Jupyter Notebook

Soft Skills

- Problem Solving, Team Collaboration, Adaptability

Language

- English (Intermediate)
